

ELAINA ASHIEL H.AMPARO

1. System Overview

- The **BTS Website System** is a web-based content management system designed to manage and organize BTS-related content such as members, albums, videos, TinyTan characters, and member photo albums. The system provides an administrative dashboard that allows authorized users to efficiently manage content using Create, Read, Update, and Delete (CRUD) operations. It is developed using PHP for backend processing, MySQL for database management, and HTML and CSS for the user interface. The system is designed to be simple, user-friendly, and responsive to ensure easy management of multimedia content.

2. Database Schema

Database Name: bts_website_db

Table 1: users

Field Name	Data Type	Description
id	INT (PK, AI)	Unique ID of the admin user
username	VARCHAR(100)	Username used for login
password	VARCHAR(255)	Encrypted password
fname	VARCHAR(100)	First name of the user
lname	VARCHAR(100)	Last name of the user
mname	VARCHAR(100)	Middle name of the user

Table 2: members

Field Name	Data Type	Description
id	INT (PK, AI)	Unique ID of the BTS member
stage_name	VARCHAR(100)	Stage name of the member
real_name	VARCHAR(150)	Real name of the member
position	VARCHAR(100)	Role or position in BTS
birthday	DATE	Birthday of the member

image	VARCHAR(255)	Member image file
created_at	TIMESTAMP	Date the record was created

Table 3: albums

Field Name	Data Type	Description
album_id	INT (PK, AI)	Unique ID of the album
title	VARCHAR(150)	Album title
release_year	YEAR	Year the album was released
cover_image	VARCHAR(255)	Album cover image file
spotify_link	VARCHAR(255)	Spotify link of the album
created_at	TIMESTAMP	Date the album was added

Table 4: videos

Field Name	Data Type	Description
id	INT (PK, AI)	Unique ID of the video
title	VARCHAR(255)	Title of the video
category	VARCHAR(100)	Video category
year	VARCHAR(50)	Release year of the video
youtube_url	VARCHAR(255)	YouTube link of the video

Table 5: tinytan

Field Name	Data Type	Description
id	INT (PK, AI)	Unique ID of the TinyTan character

character_name	VARCHAR(100)	Name of the TinyTan character
image	VARCHAR(255)	Character image file
description	VARCHAR(255)	Short description of the character

Table 6: member_album

Field Name	Data Type	Description
album_id	INT (PK, AI)	Unique ID of the member album image
image	VARCHAR(255)	Image file of the album/member
created_at	TIMESTAMP	Date the image was added

3. Explanation of CRUD implementation

- The system implements full CRUD functionality to manage all stored data. The Create operation allows administrators to add new records through input forms, which are then inserted into the database using SQL INSERT statements. Uploaded images are stored in designated folders on the server. The Read operation retrieves and displays data from the database using SELECT queries, allowing users to view members, albums, videos, and album images dynamically on different pages. The Update operation enables administrators to modify existing records by retrieving current data, updating it through forms, and saving changes using SQL UPDATE queries. The Delete operation allows removal of unwanted records using SQL DELETE statements, often with confirmation prompts to prevent accidental deletion.

4. Explanation of Search feature

- The system includes a search feature that allows users to quickly find specific records within the database. This feature uses the SQL LIKE operator to filter results based on user input. For example, searching for a member will return all records where the stage name matches the keyword entered. This improves usability by making it easier to navigate large amounts of data efficiently. The search function enhances the overall user experience by reducing the time needed to locate specific information within the system.

5. Explanation of Login system

- The system uses a secure login system to restrict access to authorized users only. Users must enter valid credentials, which are verified against records stored in the database. Passwords are encrypted using PHP's password_hash function to ensure security. Once authenticated, a session is created to maintain user login status throughout the system. Unauthorized users are prevented from accessing the dashboard, ensuring that only registered administrators can manage the content.
